Caution

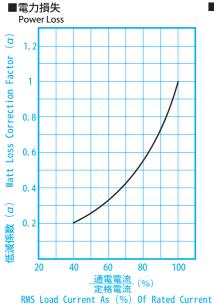

- A fuse is easily influenced by its surrounding atmosphere and by the power of the continuous electric current passing through it. To lengthen the life span of your fuses, ensure that your target workload is less than 65% of their rated current.
- When using a fuse in a DC circuit, depending on the circuit condition, you may have to use a higher rated voltage fuse than the circuit voltage. (See time constant graph)
- If there is a passibility of fusing due to an over loaded current which is less than the fuse rated current in a DC drauit, the fuse should be used in conjunction with other protectors

- 注意
 ●ヒューズの寿命は使用周囲温度とヒューズに流れる連続電流に影響されます。ヒューズの寿命を延ばす為にヒューズ 定格電流の65%以下の電流を連続使用電流として下さい。●直流回路に使用する場合、回路条件により回路電圧より高い定格電圧のヒューズを使用しなければならない場合が有ります。(グラフ時定数参照)
 ●直流回路で定格電流の5倍以内の過電流にて溶断の可能性の有る場合は、他の保護機器と併用して使用して下さい。
